

# SPA Score

- SPA is your performance factor. It reflects your contribution to the groupwork. It is calculated using both yourself ratings and the ratings of your peers.
- $>1$  means the overall impact of your work should result in your individual mark being adjusted to be greater than the mark for the group. i.e. other members of your group think you contributed more than they did.
- $< 1$  means the overall impact of your work should result in your individual mark being adjusted to be smaller than the mark for the group. i.e. other members of your group think you put in less effort than they did.
- Using the SPA as a group mark moderator means that if you have a SPA of 1.05 and a group mark of 15/20 your final mark becomes 15.75/20.

**Note:** The subject co-ordinator has the right to override SPARK calculated values. Please see the Assessment section of the subject outline for details. Please also see the “Using Spark” document for tool usages.
